I've recently moved into a rural area that does not have TV cable available, let alone high speed Internet via DSL or cable. BPL could bring me fast speed Internet, and I am an Internet junkie but BPL simply takes away to much radio spectrum. Personally, I am pursuing the installation of two way satellite Internet and plan to subscribe to voice over IP and move even my telephone service to this Internet connection. I urge you not to allow BPL, it simply takes up to much band width. BPL would cause many services such as fire departments, Emergency squads, Independent companies much grief in rectifying interference problem with their radio communications equipment from BPL.

Thank you for your time, Carl Deaver
